

Strategic Infrastructure Partnership: Powering Institutional-Grade Staking for Paribu Custody

Client Overview

Paribu Custody is Turkey's first institutional-grade digital asset custody provider, built on its proprietary ColdShield® security technology.

The platform serves corporate and institutional clients looking for:

-  Compliant, secure custody
-  Enterprise-grade digital asset services

Challenge

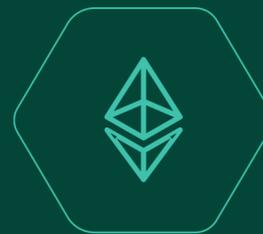

Paribu Custody sought to expand its service offering by introducing staking capabilities. Still, it aimed to expand its staking network with a partner whose infrastructure aligned with its high security and compliance standards, while integrating seamlessly into its custody framework. They needed:

-  A validator that supports a broad range of networks
-  Delivers enterprise-grade uptime, without compromising the custody model or operational workflow.

Our solution

Everstake was selected as a whitelisted validator for Paribu Custody:

- Everstake brought its globally distributed, non-custodial validator infrastructure certified under SOC 2 Type II, ISO/IEC 27001:2022, and NIST CSF, also compliant with GDPR and CCPA standards
- Through an API-first integration, Paribu Custody clients could stake assets on major networks (including Ethereum, Solana, Cardano and others) directly from within the custody environment - preserving custody integrity while enabling staking
- Everstake ensured stable validator performance (99.98% uptime since inception, with no material slashing events) and provided documentation and support to align with Paribu Custody's operational requirements

Result

Thanks to Everstake:

-  Paribu Custody was able to strengthen its staking services for its institutional clients without compromising on security, compliance, or custody practices.
-  The partnership expanded Paribu's offerings, allowing clients to participate in staking across multiple networks directly from custody, combining asset protection and staking flexibility under one roof.
-  The collaboration strengthened Paribu Custody's position in Turkey as a full-service institutional-grade custody + staking solution.

Testimonial

"We are excited to welcome Everstake among Paribu Custody's partners. With its 99.98% uptime performance, support for over 80 networks, and competitive rates across high-growth assets, Everstake will elevate the capabilities of Paribu Custody's uniquely engineered platform."

Mehmet Kafadar, Paribu Custody Director

-  99.98% uptime performance
-  Support for over 80 networks
-  Competitive rates across high-growth assets
