

Strategic Infrastructure Partnership: Powering Institutional-Grade Staking for Exodus

Client Overview

Exodus is a financial technology leader empowering individuals and businesses with secure, user-friendly crypto software solutions.

It provides an integrated environment for:

- Managing
- Sending
- Receiving

A wide range of cryptocurrencies.

Challenge

As Exodus expanded into staking, the team needed a trusted infrastructure partner capable of delivering consistent validator performance across multiple networks without compromising user asset control.

Their priority was to offer staking that felt:

- Seamless
- Transparent
- Secure, even for users with no technical background

Our solution

Everstake became Exodus's exclusive staking provider, supplying audited, globally distributed validator infrastructure aligned with SOC 2 Type II, ISO/IEC 27001:2022, and NIST CSF 2.0 frameworks.

Our engineering support ensured smooth integration, while our non-custodial staking model allowed Exodus users to retain complete ownership of their assets throughout the process.

Result

With Everstake handling the validator layer, Exodus was able to launch staking as a:

- Frictionless
- Intuitive in-wallet experience

The wallet maintained its signature simplicity while offering secure staking across supported networks.

Users gained a straightforward, reliable way to stake assets without leaving Exodus or giving up control of their keys.

Testimonial

"Everstake has been a reliable partner for years, helping Exodus customers securely and effortlessly earn rewards on the assets they hold."

Kevin Wood, Director of Revenue Operations at Exodus

- Reliable
- Secure
- Effortless
